WIKI

Design Guideline

Welcome

The Wiki is the place to go for all information about IOTA and the technology behind it.

To give visitors the best learning and reading experience, a good and well-thought-out graphic is a welcome addition to the explanations and information in the text.

If you want to contribute such graphics, this design guideline may be of help.

*This document is a WIP. If you have any suggestion, don't hestitate to open an issue on GitHub.

Resources

We want to make it as easy as possible for everyone to create graphics for the Wiki.

In the Resources repository, you will find folders containing material that may help you with your work, such as *Templates, Icons, Graphics and more*.

#111F3B
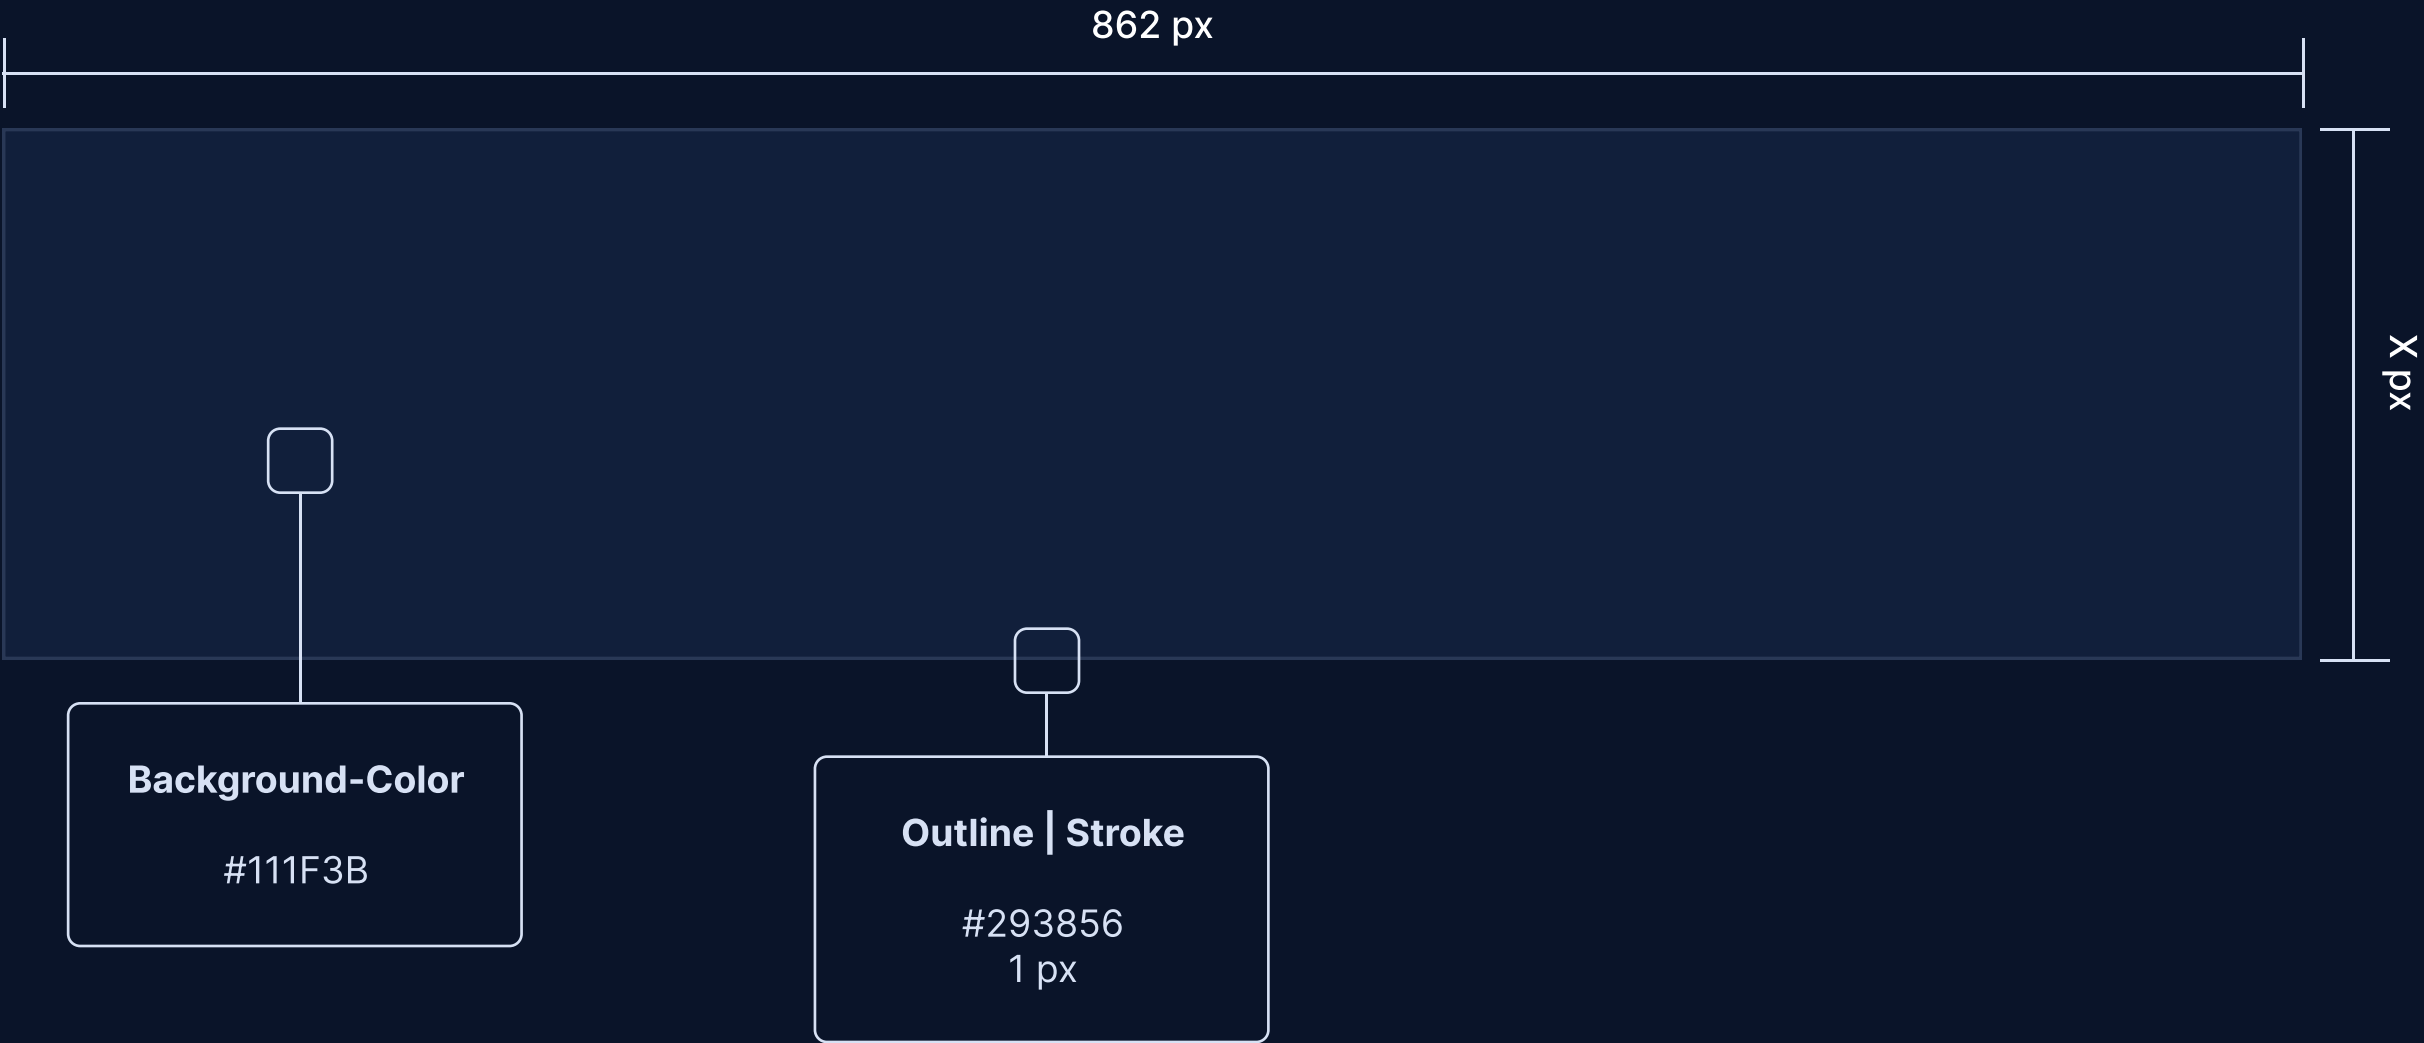

Outline | Stroke

#293856
1 px

Graphics

If you want to create graphics for the Wiki, you can find prepared material in the *Graphics*, *Templates* and *Icons* folder.

Here are some additional guides:

The height for normal graphics may depend on the content you want to design.
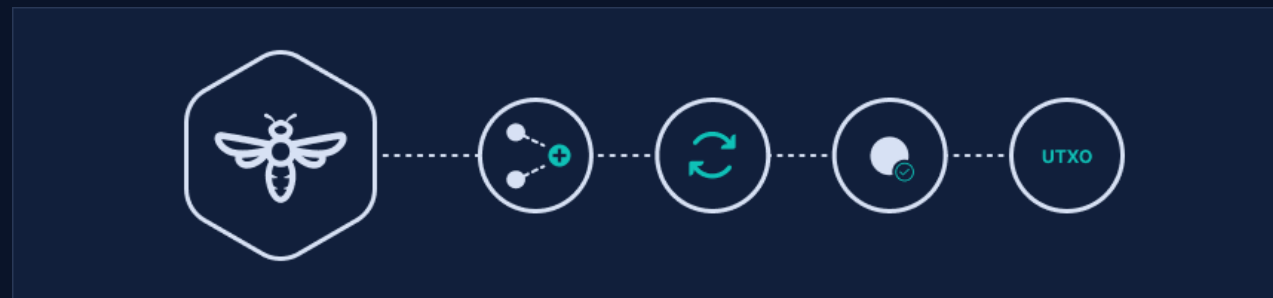

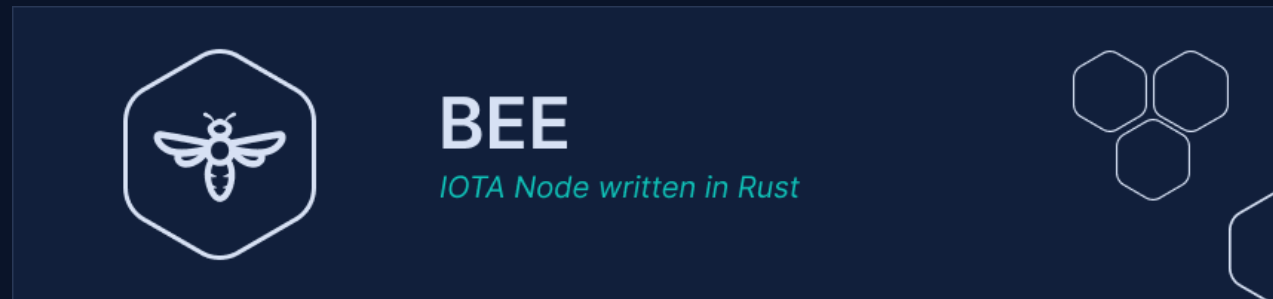

The width should stay at 862 px.

862 px

X px

Background-Color

#111F3B

Outline | Stroke

#293856
1 px

Image Examples

Build

If you are creating a graphic for the Build section, keep the design simple and straightforward. The reader should not be distracted from the important content. Design them to help understand technical information.

Learn | Participate

If you are creating an image for the Learn or Participate sections, you will have more freedom for your design. The reader should feel welcome, especially new ones.
Just - don't overdo it.

Contribute

Thank you for taking a look into this guideline.

If you have any suggestions, questions or improvements for this guideline - please open an issue in the Resources repository.
